

# Chloral Reset

Efficient in fresh and salt water, Chloral Reset is a water conditioner that quickly neutralizes chlorine and chloramines in regular tap water. Use Chloral Reset when starting an aquarium or for water changes.

**PACKAGING**

- **Nano Range,**  
Aquarium from 0 to 120 l  
(0 to 30 US gal)  
*Blister of 4 vials*
- **Standard Range,**  
Aquarium from 120 to 1 000 l  
(30 to 250 US gal)  
*Box of 12 vials*

The tap water used when filling up an aquarium or during water changes is usually harmful for the aquarium's inhabitants. Water companies often add chlorine or chloramines in the tap water to avoid the growth of pathogenic germs.

CHLORAL RESET protects the living organisms in the aquarium (plants, fish, corals, live rocks, useful bacteria for biofiltration...) from the action of the chlorinated compounds found in tap water. Chloral Reset is very concentrated and one vial will quickly render chlorine or chloramine treated water usable for an aquarium.

The specific formula of CHLORAL RESET is designed for the well-being of the fish. That is why it also contains biocolloids that will reduce the fish's stress, as well as protecting their gills and mucous membranes against external parasitic aggressions.

When starting a fresh or salt water aquarium, use CHLORAL RESET to prepare your tap water, then START UP to quickly establish the biological filtration and ensure the best water quality.

When doing a water change, use CHLORAL RESET to prepare your tap water, then BIOCLEAR FRESH or BIOCLEAR SALT to maintain your biological filtration, which is crucial for running your aquarium smoothly.

## DOSAGE FOR EACH PRODUCT

- **Nano Range :**  
*1 vial for 30 l (7.5 US gal) /15 days*
- **Standard Range :**  
*1 vial for 60 l (15 US gal) /15 days*
